

NG-001

Automatic Spring Mattress Glue Spraying Assembly Machine (Single Line)

ADVANTAGES

- 1 The fully automatic glue spraying conveyor line is composed of 6 parts, including a conveyor belt work bench, an automatic centering machine, a hot melt glue spraying machine, a hot melt glue supply system, a flipping table, and a cotton press.
- 2 The PLC, touch screen, frequency converter, remote model, etc. used in the machinery are all German Siemens brands.
- 3 The machine is loaded with formula data, and the customer enters and saves the corresponding data in advance according to the packaging and production requirements of each product. When production is required, the corresponding data is directly called out on the touch screen, and the machine is started with one key.
- 4 The machine can press the pause button in any situation and continue to complete the entire packaging process without starting from scratch;
- 5 The glue spraying gun has a total of 4 gun heads, which are divided into two groups for independent movement. It can provide multiple spraying trajectories and ensure that the speed meets the requirements.
- 6 The spray gun head can adapt to different product heights and automatically adjust.

TECHNICAL PARAMETER

Glue spraying efficiency	380V/50HZ	Rubber hose	450~800MM
Number of spray guns	3000*2300MM	Cotton press pressure	1.6T /0.5MP
Spray pattern	2800*2200MM	Maximum mattress size	2200*2200mm
Applicable products	Sponge mattress or bagged spring mattress	Maximum mattress height	400mm
		Voltage	380V/50HZ
		Total power	28KW
