

NG-05R

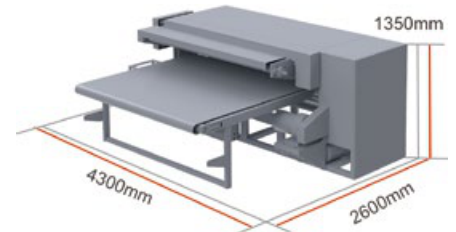

Mattress Rolling Machine

ADVANTAGES

- 1 This machine is very suitable for wrapping pure latex mattresses or pure sponge mattresses. For thick mattresses or Spring mattresses, it is recommended to use a compressor for compression before using the device for wrapping.
- 2 High production efficiency and simple operation. Simply place the mattress and bag, press a button, and the operation can be completed automatically. Generally, workers can proficiently operate the machine after 5 minutes of learning, save manual cost.
- 3 The cost of packaging consumables is low, and each mattress only requires a PVC or PE bag with a diameter of about 320mm. After rolling, the volume of the mattress is greatly reduced, thereby greatly reducing product transportation and storage costs.
- 4 The overall structure is compact and concise, with a small footprint.
- 5 The machinery has CE certification, high safety, stable performance, and convenient installation and maintenance.

MACHINE SIZES

Optional diameter(Fixed)
200/230/268/290/320/370/
400/450mm

TECHNICAL PARAMETER

Mattress Size	L2000*W1800*H[50-250] mm	Transfer Power	1.5 kw
Working Table Width	2060 mm	Enter Power	0.75 kw
Efficiency	1 pcs/min	Machine Total Power	12.15 kw / 14.15kw (450mm)
Pushing Power	3.7 kw	Weight	2.5 Tons
Rolling Power	5.5 kw / 7.5kw (450mm)	Voltage	3 Phases 380V/50HZ (Customized)
