

NG-06R

Semi-Automatic Mattress Rolling Machine

MACHINE SIZES

ADVANTAGES

- 1 This mechanical wrapping machine has strong adaptability, suitable for spring mattresses, sponges, or latex. It is usually used in conjunction with a compressor to compress before wrapping.
- 2 There is no limit to the thickness of the mattress, and the diameter of the rolled mattress is not limited. The size of the diameter is determined by the thickness and length of the mattress, and the normal diameter is within the range of 28CM-35CM.
- 3 Perfect packaging effect; Firmly wrapped, it will not expand or become larger after packaging, which is economical and aesthetically pleasing. After rolling, the volume of the mattress is greatly reduced, thereby greatly reducing product transportation and storage cost.
- 4 High production efficiency and simple operation. Generally, workers can proficiently operate the machine within 5 minutes of learning.
- 5 The machinery has CE certification, stable performance, high cost-effectiveness and convenient installation and maintenance.

TECHNICAL PARAMETER

Maximum Mattress size	2100*2000mm	Transfer Power	0.75 kw
Mattress Thickness	<400mm	Machine Total Power	2.5 kw
Package Material	PE/PVC film	Weight	1.2 Tons
Efficiency	1 pcs/min	Size Machine External	L4400*W2050*H1100mm
Working Table Size	2100*1600mm	Voltage	3 Phases 380V/50HZ (Customized)
Exit Diameter	Unlimited Diameter		
Spindle power	1.5 kw
