

NG-31M

Foam compress machine

ADVANTAGES

- 1 The machinery adopts a drum and conveyor belt conveying method, with the function of automatic product entry and exit. (So when multiple sponges are compressed, there will be less misalignment.
- 2 Widely applicable for compression and packaging of various sponge materials.
- 3 This machine also has an automatic sealing function, a sturdy pressing plate structure, and staff can also move sponges on it.
- 4 Multiple sponge sheets can be compressed simultaneously, such as 40-50 sponges.
- 5 Save storage space and transportation costs. Originally four or five containers of sponges, after compression, only one container is needed to load the goods. This can save storage and transportation space for manufacturers, thereby saving related costs and creating a win-win situation between manufacturers and customers.
- 6 Convenient loading and unloading, improving loading and unloading safety factor

MACHINE SIZES

TECHNICAL PARAMETER

Voltage	380V/50 Hz	Seal length	3500 mm
Pressure size	2300*2080 mm	Seal width	6 mm
Max size	2200*2000 mm	Power	16 kw
Foam height	≤1100 mm	Overall dimensions	L5300*W3170*H3700mm
Max lift	1300 mm	Weight	5000 kg

Pressure

standard
